RHEINZINK

Château Gbeľany showcases a skilful combination of tradition and modernism. The beautiful baroque castle, which is at least 260 years old, was converted into a modern conference hotel while complying with the landmark protection. With its contradictions and the contrast between historic, playful and modern, reserved architecture, the castle makes a captivating impression even from a distance. This becomes especially tangible in the interior courtyard, which can also be used for open-air events and may be combined with the interior rooms through spacious glass walls. A total of 15.6 t of RHEINZINK titanium zinc with the RHEINZINK CLASSIC bright rolled surface quality were used in a double standing seam and flat lock tile system.
